Dr. Kathy Matthews
Department of Biology
Indiana University
Bloomington, Indiana 47405

Dear Kathy,

I was thumbing through the DIS that came today and realized that I did not send you the flies I promised. I have two deficiencies that uncover a larger stretch of region 62 than the one you have listed. These two deficiencies were made and characterized by Tim Sliter, now at SMU. The reference of interest is Sliter, et al., 1989, Genetics 123: 327-336. The breakpoints according to Tim are:

DR3 Df(3L)R^{G5} = Df(3L)62A10-B1;62C4-D1 Df ve / TMbe
DR3 Df(3L)R^{G7} = Df(3L)62B8-9;62F2-5.

Remove #57 from DR3

We are making up vials to send. They will arrive under separate cover. If they don't survive, let me know.

Sincerely,

James M. Mason
