Steve Wasserman ✓

Enclosed are the deficiencies and lethals you requested in the 82E region. All of the lethals and Df(3R)110 were γ-induced on an isogenized rotipa (ro th st ri roe p^p e^s ca) chromosome. Df(3R)6-7 and Df(3R)3-4 were γ-induced deletions of a P-element at 82F. Df(3R)Z-1 was obtained from Steve Dinardo. Below is the physical & complementation map of the region. Please let me know if you need any more stocks or information.
