Kathy:

After many months the flies I promised are on the way. There are four stocks.

Crew (on 2)
y w; CyO, P[w+,cre]/Sc, Chr 2 marked with w+ and makes Cre protein.

Crey 1b (on X)
y w P[y+, cre]; Cyo/Sco, Chr 1 marked with y+ and makes Cre protein

Crey 1b (on the X)
y w P[y+, cre]; TM3Sb/D, Same as above but w/Chr 3 balancers

y w; MKRS, FLP/TM6B
P[w+, cre]; this one useful for "waffling" because MKRS produces FLP protein and TM6B produces Cre protein.

I'm sorry I procrastinated on these for so long.

Best regards,

Dan
