Subject: Pinto latheo personal communication FBrf0136331
Date: Tue, 10 Jul 2001 13:37:12 -0400 (EDT)

Here is the text of the personal communication, now in Sybase
with FBrf0136331:

"The following information about the latheo gene and alleles described in FBrf0109005 were provided by Dr. Shirly Pinto on July 6, 2001:

1) Based on our sequence analysis in combination with the Berkeley genome project the correct transcript unit map of latheo is as described in the attached document. [FlyBase curator comment: copy of transcript unit map is archived.]

2) The coordinates described in table 1 [of FBrf0109005] correspond to AF153209 sequence until nucleotide 2885, but are off by 1 nucleotide after that.

3) In lat[vr6R6], nucleotides CCAGATCC are missing."

Leyla
